Building Technologies that Build Businesses.

June 30, 2026

The Last Frontier of Government Tech — And Why It's Finally Changing

The cover image for the article. It features a dark green background with several overlapping, semi-transparent circles of varying shades. In the foreground, a man's profile is shown in a halftone or dot-matrix style, looking thoughtfully to the left. His hand is resting on his chin. The title text is overlaid on the left side of the image.

Why Administrative Courts Are the Last Frontier?

CaseHub

30,000 Administrative Law Judges manage tens of millions of cases across the United States every year. Most are still running on legacy systems — or no dedicated system at all. While the federal judiciary just announced it's replacing CM/ECF after nearly three decades, the bigger story is what that signals for the workers' comp commissions, tax tribunals, and ALJ offices that haven't modernised yet. We break down why administrative courts fell so far behind, what's finally driving change, and what purpose-built technology for this space actually looks like.

Why Leading Manufacturers Are Ditching Physical Samples — And Winning Deals Faster

B2B manufacturing sales cycles drag on for one core reason: buyers can't commit to something they can't properly see. Physical samples take weeks. Custom configurations multiply the problem. Feedback loops eat up the rest. In this piece we break down exactly where manufacturers lose time and how 3D visualisation is cutting sales cycles in half by letting buyers see, compare, and approve before a single unit is produced.

See how manufacturers are closing in days, not months

From Rough Requirements to a Ready-to-Build Portal

Vector Global is a leader in global logistics, and its clients needed a better way to track shipments happening across the world in real time. They came to us with an idea and rough requirements. Through a collaborative Design & Discovery phase, we mapped the full user journey, integrated multiple third-party systems, and turned complexity into a clean, intuitive portal that makes global shipment data easy to read, easy to act on, and ready for development. This is the kind of work we love, where the real value is in the thinking before the building.
